

Year 2  
 Science - Living Things and their Habitats

Key Vocabulary	
<b>life processes</b>	The things that all living things do: move, breathe, sense, grow, make babies, get rid of waste and get their energy from food.
<b>living</b>	Things that have all the life processes.
<b>dead</b>	Things that were once living but are not any more.
<b>never lived</b>	Things that were never living and never had the life processes.
<b>Habitat</b>	Where a living thing lives.
<b>suitable</b>	Something that has the things that are needed.
<b>basic needs</b>	The things a living thing must have to stay alive.
<b>food chain</b>	How each animal gets its food. How living things depend on each other to stay alive.

Key Learning
All objects are either living, dead or have never been alive.
Plants and animals are living things.
Dead things are dead animals and plants or parts of animals and plants that are no longer attached.
Objects made of rock, metal and plastic have never been alive.
Animals and plants live in a suitable habitat. A habitat provides the basic needs of the plants and animals living there.
Within a habitat there are different micro-habitats.
The plants and animals in a habitat depend on each other. Animals get their food from plants and other animals.

Are you a Milecastle Megamind?

How do we know if something is living?

Can you choose a living thing and explain why it is suited to its habitat?

Draw a food chain to show how the living things in a habitat depend on each other.
